reasons, grease is the most widely used lubricant for rolling bearings. It is used a bearing that is pre-sealed with grease (sealed/shield bearing), or if using an unsealed bearing, fill the bearing and housing with the proper amount of grease, and replenish or change the grease regularly. 11.3.1 Types and characteristics of grease

operational effects: too much grease, for example, can lead to higher starting and running torque or, in high-speed bearings, to overheating. The following should be observed: Low operating temperature = long grease and bearing life High-speed greases should not run at more than 80 °C (176 °F).

Special knowledge Economical lubrication for every component.

FUNCTION OF A GREASE Reduce friction and wear in the machine element being lubricated under various operating conditions. Protect against rust and corrosion. Prevent dirt, water and other contaminants from entering the part being lubricated. Maintain its structure and consistency during long periods of use.
