The Herringbone - Official Site

Most fish have largish bones which support the core muscles. Around the abdomen, they act as a sort of framework protecting the organs. With herring, the bones are really fine: almost thread like and there are lots of them: more than on any other fish I've eaten. I would like to know why herring have such fine bones.

anatomy - Why do herring have fine bones - Biology Stack

Oh the bones! Herring, typical of forage fish species like smelts, anchovies, or their close cousin sardines, have tons of little hair-thin bones running throughout their bodies. Even after filleting there is a small line of pin-bones that remains in the meat.
